

(1) Create an empty relational table for Goals:

```
```sql
CREATE TABLE Goal (
 Gnumber INT PRIMARY KEY,
 Gname VARCHAR(255)
);
```
```

(2) Insert two goals into the table:
choosing "Goal 1: No Poverty" and "Goal 2: Zero Hunger" as examples.

```
```sql
INSERT INTO Goal (Gnumber, Gname) VALUES (1, 'No
Poverty');
INSERT INTO Goal (Gnumber, Gname) VALUES (2, 'Zero
Hunger');
```
```

(3) Display the total number of goals in the table:

```
```sql
SELECT COUNT(*) AS TotalGoals FROM Goal;
```
```

(4) Delete all the goals stored in the table:

```
```sql
DELETE FROM Goal;
```
```

(1) Add domain constraints for contract-duration:

```
```sql
ALTER TABLE EMPLOYEE
ADD CONSTRAINT chk_contract_duration CHECK
(contract_duration BETWEEN 1 AND 3);
```
```

```
```
```

(2) Add salary information to the EMPLOYEE table:

```
```sql
```

```
ALTER TABLE EMPLOYEE  
ADD salary DECIMAL(10, 2) NOT NULL CHECK (salary <=  
99999999.99);
```

```
```
```
